A few days ago, I bought a Samsung Galaxy S9 to replace my old Samsung S7. But after I copied data from my old phone to the new one, all data have become messy. Thus, I need to manage these files in specific places again, and for those media files like music, photos, and videos, I can manage them as only a piece of cake. Nonetheless, when it comes to the messages and contacts, I really feel headache. While my phone is linked to a computer, they are invisible. Where do the data hide? Is there any way that can bring out the data, so that I am able to manage them on computer? It is very tired and time-consuming to manage these data on my phone directly, so anyone can help? - From a Samsung user To efficiently and effectively manage files on Samsung phone, especially the contacts, text messages and call logs stored in internal memory, you need to turn to a professional Samsung Galaxy desktop manager - MobKin Assistant for Android. Without this kind of tool, it would be difficult and painful for you to perform and complete the file management. Here, you might wonder: MobKin Assistant for Android is a powerful Android file manager tool that are compatible with almost all the Android phone models, including Samsung, Motorola, LG, Huawei, Xiaomi, HTC, Sony and so on. With it, you are able to backup and restore all your Android data with one click. Apart from that, its "Export", "Import", "Delete", "Add" and "Edit" functions can help you to manage the contacts, text messages, call logs, images, music, videos, applications and other files on your Samsung phone without hassle. To meet different user needs, this software offers two versions to its users: Windows and Mac version. Hence, you can download the needed version as the case may be. After accomplishing the download, you should properly install the program on your computer by going with the wizard. Then you can begin to manage your Samsung files with the tool. Here, you are recommended to know the supported file types of this program beforehand. To begin with, you need to launch the program and connect your Android phone to computer and make it be recognized. Here you have two options: Option 1. Connect via USB - Use a USB cable to connect your Samsung Galaxy phone to computer. - Enable USB debugging on your device and install USB driver on your computer if required. (Supposed that the driver installation fails, you can get the solutions from the page: How to Do If the Driver Installed Failed>>) - If your mobile phone is running on Android 4.2 or above, you should go on to authorize the connection by clicking "OK" or "Allow" on your device while getting the following interface. - Install the Assistant for Android App on your Samsung phone and the connection will be successfully built after you install and launch the application. Provided that the program fails to recognize your Samsung, you can search for solutions from the page: What to Do If the Program Does Not Recognize My Android Phone. Option 2. Connect via Wi-Fi - Choose "Connect via WIFI" on the primary interface and then you will get an interface as below: - Go with the prompts to download the Assistant for Android APK file on your Samsung and properly install it. - Open the application and tap on "Wifi Connection" to scan the QR code on the program. Then the Wi-Fi connection between your mobile phone and computer will be established. When your Samsung phone is successfully connected to computer, you will see an interface as follow. That means you can start to manage the phone data with the tool. With this program, you are able to: 1. Take Screenshots on Android 2. Backup & Restore Android Data with One Click 3. Manage Contacts on Samsung Phone 4. Samsung SMS Management 5. Import/Export/Delete Samsung Call Logs on PC 6. Add/Export/Delete Media Files & Books on Samsung Device 7. Install/Uninstall/Export Samsung Apps Now let's see how to perform them: Take Screenshots on Android Turn on the page you want to capture on the mobile phone and then click the camera icon on the main interface of the software. After that, you can choose the option "Save screenshot to computer" to capture and save the screen to computer. Backup & Restore Android Data with One Click - Backup Android data: Go to "Super Toolkit" > "Backup" > choose the wanted folders > select a location to store the data > "Back Up". - Restore data to Android: Enter "Super Toolkit" > "Restore" > elect the files you want to restore > "Restore".
