Are all those images and clips worth storing? Many of them probably aren't. Some of you may be very satisfied with the shutter and also have many repetitive attractions. Check out your gallery to see the things that are really worth having. You may have backed many of them in the cloud already. Why is it on your device? Read more: How to back up your photos and videos, use the Edgar Cervantes/Android Authority microSD card may or may not have a microSD card slot on your phone. If you have such an option, you can transfer all large files using a microSD card. Some phones support customizable storage, but these are becoming increasingly rare. If you were blessedYou can use the Microsd card as an internal memory. The file becomes part of the location of the phone, and not the external plugin on which you can throw it. In this process, you should remember some shortcomings. First, the Microsd card will only work with the phone considered. You also should not delete the card after installing it as a storage. This leads to the reset of factory data. In addition, many Microsd cards work slowly. Get a quick one that can keep up with your device. Read more: Here are the best Microsd cards for Android. Use a cloud to slow down space. Cervantes / Android Authority services can offer a lot, especially for those who are limited in the memory department. Most of these services are free or cost small money. For example, you can use Google photo to upload all your high-quality photos for free. Do not forget the unlimited high-quality storage, which expires in June 2021. In addition, services such as Google Drive and Dropbox allow you to very easily create backups of your entire content. See which option will convince you and use it. Those who have problems while maintaining free space on their devices can also have an excellent music collection. If you have concerts at Song concerts, we recommend switching to online services, such as YouTube or Spotify Music. More: the 10 best applications of the cloud storage to remove your downloads if you look like me, your download folder is full of things that you do not need. Here we usually find many files that you might need for a minute or two a few months ago, but no longer important. Go ahead and use your file manager to delete old files. Most phones now have one. If not, follow the link below. Here it is: the best Android file managers for Android cleaning the cache to slow down android cleaning cache are not always good for slowing the space for Android. This is data that your phone is usually needed for faster and more efficient work. However, if you can definitely create and want to quickly make room, cleaning Kesh is a quick solution. Kesh cleaning is not always a good idea. Edgar Cervantes, just go to "Settings"> "Applications". Go to the "All Applications" section and go to any application whose cache you want to clean. Click the memory section and Kesh. There will be the opportunity to clean the cache and clean the memory. How to clean the cache on Android: Open the Settings application. Select applications. Click show all applications. Enter the application you want to clean. In the vault and cache. Tap on its cache to clear. You can also choose a "clean storage" if you want to clear all app data. Removing autonomous areas Google map cervantes / android authority limits Google can easily move around your area without using data. Cards can be downloaded for autonomous use, but are expensive. Offline Cards can happen in your storage. I have more GB data offline cards. Go to Google Maps, click on your profile picture and go to the offline option. You will see a list of downloaded domains. Click the menu button with three dots on the right to see multiple options. Click Uninstall to get rid of it. This will definitely free up space for Android. How to delete offline cards in Google cards: Open Google cards. Click on your profile picture. Choose autonomous cards. Tap the three-dot menu next to the loaded domains. Tap "Delete". Confirm when selecting Yes. Use Factory Data Reset. It's best to start first and discard the factory data if nothing helps. This will erase everything on your phone and return the device to the original boot location (at least at the software level). Your apps, photos, videos, files and other content will be lost, so make sure to have a backup of anything you think is needed. How to restore factory data on Android: Go to the Settings app. Click system. Press reset parameters. Select to delete all data (Reset Settings). Click "Delete all data". Confirm your personality. Confirm by clicking "Erase All Data". Frequently asked questions, does the app leave a gap when closed? NO. Therefore, we do not recommend this option. Except for the application, it just closes. All these apps will stay on the phone. Does the whole amount of memory really slow down the phone? Yes. Android uses your storage for cache and other times for time. If your storage is nearly full, it will have nowhere to save temporary data. Also, storage units start to slow down with enough records and reads. How often do you need to find Android? There is no definitive answer to this question, but we recommend cleaning the Android store once a month. Depending on your usage, you may need to do this more often. How much space should I leave for Android for free? Experts say that Android started showing problems in less than 200 MB of free space, but very close. We say that you need to leave at least 3-4 GB. This should ensure the availability of temporary file locations and updates. Updates.
