Other medications such as anti-inflammatory drugs and some analgeticians can also mask fever. The presence or absence of fever should rarely be used as the measurement of the significance of the disease. Fingerprints, ears wax, dust and other dirty compounds reduce transparency, resulting in lower temperature readings (see also care and cleaning). If lens filters are finished and you need to take a temperature, you can use the following lens filter cleaning procedure:
Á ĉ ĉ Clean the lens filter without removing it from the thermometer with a soft pan or a cotton swab moistened with alcohol. Not use hot or boiling water .
Á ĉ Seal completely with a soft pan before reusing.
Á ĉ Replace the lens filter as soon as possible by a new one (LF 40).
Á ĉ In most stores, additional lens filters can be purchased (LF 40)
