Android bluetooth remote control app. Bluetooth remote shutter app android. Bluetooth remote app for android tv. Lg bluetooth remote app android. Bluetooth remote home automation system using android application. Best bluetooth remote app for android tv. Bluetooth remote control app for android tv. Android box bluetooth remote app.

Also available on the Bemobi App Store. Use your device as a single or multi-touch mouse. Mirror your computer screen to your device. Turn off, lock, or wake up your computer using WOL. Supports standard, 3rd party, and custom keyboards. Browse, manage, and open files and folders. Control Spotify, iTunes, Netflix, XBMC, and much, much more. Get notified of big news. Don't worry, we won't send more than a couple e-mails per year. See all media recognition here. Unit converter: currency, temperature, energy, and much more Manage your downloads from your smartphone A fast, safe, and simple VPN service A small, fast, and elegant launcher Try new browser features from Opera Create all sorts of automatic gestures Knitting Mushroom You can use the Google TV app on your phone or tablet to navigate your Android TV. On your Android phone, open the Google TV app . Near the bottom right, tap Remote . At the top, tap Scanning for devices. Choose your device. To complete pairing, follow the instructions on your phone and TV. After pairing, you can use your phone or your remote. Check your Wi-Fi connection To connect through Wi-Fi, make sure your device is on the same network as your Android TV. To check or change the connection on your TV: On your remote, press Home. At the top right, select Settings . Under "Network & Accessories," select Network Advanced Network status. Find the Wi-Fi network name, listed next to "Network (SSID)." Make sure it's the same as the network on your device. To check or change the connection on your phone: On your phone, open the Settings app. To find your network or choose a different network, tap Network & internet Wi-Fi. Restart your Android TV Unplug the power cord. Wait 10 seconds. Plug the power cord back in. Set up the virtual remote again. Get answers from community experts Joe Hindy / Android AuthorityThe IR blaster is officially a niche feature these days. It's becoming rarer and rarer as a feature since phones are trying to remove as many ports as possible. However, those with an IR blaster are useful for all kinds of little things. One such instance is as a remote control for basically anything with an IR receiver. That can include TVs, air conditioners, some thermostats, cameras, and other such things. Today, let's talk about TV remotes. Here are the best TV remote apps for Android.Please note, most ecosystems provide their own remote apps these days. LG TVs have LG-made remote apps. Samsung does the same as well, and so do Google, Apple, Vizio, Roku, and most others. Before you start reading, we honestly recommend the remote app made by the manufacturer of the thing you're trying to control. Also, modern Android phones don't come with IR sensors anymore, and that's how a lot of these worked on older TVs. Your mileage will vary by a rather wide margin. The best TV remote apps for Android Joe Hindy / Android AuthorityAnyMote is one of the better TV remote apps. It boasts support for over 900,000 devices with more added on a frequent basis. It's also not just for TVs. It includes support for DSLR cameras, air conditioners, and virtually any tech that has an IR blaster. The remote itself is simple and easy to read. There are also buttons for things like Netflix, Hulu, and even Kodi if your TV supports those things. It's a tad expensive at $6.99 and it hasn't seen an update since early 2018 as of the time of this writing. However, it does still work with phones with an IR blaster. Price: Free / Hardware costs moneyJoe Hindy / Android AuthorityGoogle Home is definitely among the best remote apps. Its primary function is to control Google Home and Google Chromecast devices. That means you'll need one of those to make this work. Otherwise, it's fairly simple. All you need to do is pick a show, movie, song, image, or whatever. You then cast it to your screen. It can't do things like change the channel. It also can't change the volume. However, you can change the volume on your phone and that has the same effect. It'll only get better as time goes. The app is free. However, Google Home and Chromecast devices do cost money. The official Roku app is excellent for Roku owners. The app allows you to control pretty much everything on the Roku. All you'd need your actual TV remote for is volume. The remote with the Roku app comes with fast forward, rewind, play/pause, and navigation buttons. It also comes with a voice search. It's not what you'd think of when it comes to TV remote apps because you don't need an IR sensor to use it. However, those with a Roku don't really need a full-fledged remote app anyway. The app is also free. Joe Hindy / Android AuthoritySure Universal Smart TV Remote is a competent TV remote app with an absurdly long name. It's one of the great TV remote apps. It works on a whole bunch of TVs. Like Anymote, it also supports other devices with an IR blaster. It has the added bonus of DLNA and WiFi support for casting photos and videos. There is even support for Amazon Alexa. We thought that was rather forward-thinking. It also means that Google Home isn't the only app here with support for a personal assistant app. It's a tad rough around the edges. However, you can try it before you buy it. Twinone Universal Remote is one of the better free TV remote apps. It features a simple design. You should have no problems using it once you set it up. It should also work for most TVs and set-top boxes. There is even support for some devices that don't fit into those categories. Right now, the only bad part is the advertising. Twinone doesn't provide a way to get rid of them. We'd like to possibly see a paid version in the future to accommodate that. Additionally, this one only seems to be available on certain devices. Otherwise, it's a good option. Unified Remote is one of the more unique remote apps. It's useful for controlling one's computer. This is advantageous for those who have HTPC (home theater PC) set-ups. There is support for PC, Mac, and Linux. It also comes with a keyboard and a mouse for better input control. It's also great for Raspberry Pi devices, Arduino Yun devices, and more. The free version has a little over a dozen remotes along with most of the features. The paid version comes with everything, including 90 remotes. NFC support, Android Wear support, and more. The Xbox app is a perfectly good remote app. It allows you to access many parts of Xbox Live. That includes messages, achievements, the news feed, and more. There is also a remote built-in. You can use it to navigate the interface, open apps, and more. It'll give you quick access to play/pause, rewind, fast forward, back, and other buttons that you'd usually need a controller to access. Many people use their Xbox as an all-in-one entertainment package. Those people can use this app to make it a little easier. Price: Free / Up to $6.49Joe Hindy / Android AuthorityYatse is one of the go-to remote apps for Kodi. It has a boat load of features. You can cast media to your streaming devices if needed. It also has native support for Plex and Emby servers. You can access an offline library, control Kodi in its entirety, and it even has support for Muzei and DashClock. We're only at the tip of the iceberg when it comes to things this app can do. However, this is best used on something like a home theater PC connected to your TV. You can try it out for free. You'll get every feature if you go pro. Joe Hindy / Android AuthorityMost TV manufacturers have remote apps for their smart TVs. These apps usually have all kinds of functionality. They connect to your smart TV over WiFi. That means you don't need an IR blaster to make these work. You can change the channel or the volume. It'll even let you select apps on the TV. Some of the manufacturer apps are pretty good. Samsung and LG tend to do an okay job with their apps especially. Some aren't so great. We couldn't test every manufacturer. Thankfully, pretty much all of their remote apps are free to download. Thus, you can try them out without financial risk. We have Vizio's linked up. Just search for your manufacturer in the Google Play Store to find the others. Joe Hindy / Android AuthorityMost phones with an IR blaster come with a remote app. You can typically find these in the Google Play Store. For instance, some Mi devices uses Xiaomi's built-in TV remote app (linked). These are the apps that the manufacturers tested with their devices. Thus, it's fairly likely that they'll work at least okay. You usually don't get a lot of features. However, OEMs include those apps on their devices for a reason. At least they usually do. Sometimes they'll even pre-install the pro version so you don't have to buy it. You might as well give these a shot first to see if they work since you already have them. Best AppsGoogle Play Store Manage your daily deliveries with ease Unit converter: currency, temperature, energy, and much more Magic Mobile Studio Compila E.I.R.L. Manage your downloads from your smartphone A fast, safe, and simple VPN service A small, fast, and elegant launcher Xiaomi Inc. We're not yet at the point where one device can rule over everything, but we're getting awfully close — especially when it comes to controlling your TV set as well as other smart devices. A multitude of apps can turn your Android phone into a remote control for your TV, PC, media center and a variety of smart appliances. We've searched through the Google Play store to find the best Android remote apps available. Check out this collection of apps for the couch potato in you.Android TV Remote Control(Image credit: Google)The Android TV Remote Control serves as a generic universal remote for Android TVs, providing basic D-Pad, touchpad and gamepad controls for navigating your Android TV's interface. The app also includes support for voice controls, as well as the use of your phone or tablet's virtual keyboard to input text. The app connects to your Android TV through your local network or via Bluetooth.Download Android TV Remote Control: AndroidAmazon Fire TV Remote(Image credit: Amazon)Amazon's Fire TV set top box is a pretty neat video streaming device, especially if you're running with a Prime account. While the Fire TV box already comes with a WiFi-capable remote, you can take things to the next level with the Amazon Fire TV Remote app, which copies the functions of the handheld remote, turning your touchscreen into a navigation pane, complete with playback controls, a virtual keyboard, and voice command support.Download Amazon Fire TV Remote: AndroidYonomi (Image credit: Yonomi)The Yonomi app works like an all-in-one automation hub app for smart homes and appliances, using a system of triggered Routines to automate and control more than a 100 different devices from a variety of manufacturers. As an agnostic platform that can work with a variety of systems and automatic device discovery through Wi-Fi gives Yonomi a solid draw, and the addition of recommended recipes for specific devices makes things a bit more user friendly to set up. You can even set up Yonomi to work with Google Home and Amazon Alexa, triggering Yonomi's routines from the popular smart speakers.Download Yonomi: AndroidMi Remote (Image credit: Xiaomi)You don't need a Xiaomi phone to take advantage of the Mi Remote app — which is good since Xiaomi phones aren't on sale in the US. But Mi Remote will work with almost any commands over standard Wi-Fi protocols. You can also expand the app with the Peel Mi Remote extension, which adds a TV guide and personalized show recommendations to the core Mi Remote experience.Download Mi Remote: AndroidGoogle Home(Image credit: Google)With Google releasing an increasing number of smart home devices such as the Google Home and Chromecast devices, the old Google Cast app has been rebranded as Google Home.While the name and the coat of paint may have changed, Google Home still does the job as the all-in-one command center for your Chromecast and other Google devices, while also supporting an expanded range of smart appliances such as lights, cameras, and thermostats.Google Home showcases a wide range of Cast-enabled apps, featuring content from these apps and allowing you to do things like use the app to open up and stream a new episode from a Netflix series. The device control tab handles everything from dimming the lights to controlling speaker volume, and you can even set automated routines to trigger with a single button press.Download Google Home: AndroidAmazon Alexa(Image credit: Amazon)Of course, Google is far from the only player in the smart home hub and home automation game. Amazon's Echo smart speaker also functions as an internet-enabled smart home hub, and the Alexa app turns your phone into a setup guide and remote control for your Alexa-enabled devices. Among the many different Alexa skills, the Alexa app can show you what music is playing and information you've searched for. You can let the app manage your alarms, searches, music playback, shopping lists and more, making Alexa an increasingly capable smart assistant that learns from your shopping, surfing and media habits.Download Alexa App: AndroidRoku(Image credit: Roku)Roku's streaming service on a stick provides a wide variety of shows, movies, and channels to watch, and the Roku app turns your mobile phone into a Wi-Fi-driven remote control for the streaming stick. Users can browse for movies and TV shows, enter searches through a keyboard or through voice input, add channels and games, and even listen to streamed audio beamed straight to the phone with Private listening. Of course, you'll still need a Roku device, and certain content may require premium subscriptions or purchases.Download Roku: AndroidSmart Things Mobile(Image credit: Samsung)Of course, TVs aren't the only things that you can now control remotely from an Android phone. Samsung's Smart Things Mobile app serves as a centralized control app for devices connected to your Smart Things hub device, such as smart outlets, motion sensors, and more. Users can configure the behavior of each device, monitor the status

of things like whether a smart outlet is turned on or off or whether a door is closed or open. You also can schedule actions and configurations, and the Smart Things app can also connect with the Amazon's Echo smart speakers, providing you with voice control for your connected devices and switches.Download Smart Things Mobile: AndroidIFTTT(Image credit: IFTTT)IFTTT is a fantastic mobile task automation app, and it also makes a great addition to smart appliances that take advantage of the Internet of Things. The app allows users to create customized "recipes" or tasks built around the structure "If this, then that" (from which the app takes its name). IFTTT employs a wide variety of triggers and actions ranging from websites, apps, and even smart devices, appliances, and peripherals. You can even browse through other people's trending and featured recipes, as well as themed collections and all-time favorites that you can install or modify. Using a variety of triggers, from GPS to Wi-Fi connection, you can automatically turn smart appliances on or off at your return, or trigger tasks with a status message.Download IFTTT: AndroidYatse(Image credit: Tolriq)Kodi is a fantastic open source media center for playing local and streaming media on your HTPC and connected devices. While there is an official remote control app for Kodi (known as Kore), you can also get your hands on a feature-packed third-party remote app, Yatse, which adds on to the basics like playback controls with features such as voice control, support for Plex and Emby servers, widget controls, and custom controls. In-app purchases unlock extra features such as streaming media to and from your Android device, cloud-saved settings, and more. With an app like Yatse, there's little reason to fidget around with a keyboard or mouse for your HTPC or Kodi box, just sit back, relax, and put on your favorite shows and streams.Download Yatse: AndroidUniversal TV Remote Control(Image credit: CodeMatics Media Solutions)Universal TV Remote Control allows you to use your phone's IR blaster to send commands to more than 300 different brands and models of TVs, as well as commands to smart TVs through Wi-Fi. The app supports a wide variety of devices with traditional IR receivers, and the smart remote features don't even require an IR blaster on your phone — just a Wi-Fi connection to pair to your TV with.Download Universal TV Remote Control: AndroidASmart Remote IR (Image credit: NXRsoft)NXRSoft's ASmart Remote IR works with built-in IR blasters on Samsung and HTC phones to send commands to a variety of appliances, from TVs and set-top boxes to air conditioners and DSLR cameras. The app comes with a number of built-in remotes, with more being added, and you can organize your remotes into rooms for convenient sorting and use.Download ASmart Remote IR: AndroidZaZA Universal TV Remote (Image credit: Tiqiaa)The ZaZa Universal TV Remote app uses the internal IR blaster of Samsung, Xiaomi, Oppo, HTC, Lenovo, Huawai and TCL phones to provide a universal remote app that supports a wide variety of appliances. The app contains a searchable database of more than 300,000 appliances across 8,000 brands, which you can sort through by brand and model, covering everything from TVs and air conditioners to smart light switches and DVD players.Download ZaZa Remote: AndroidSmart TV Remote(Image credit: Adiroid)Adiroid's Smart TV Remote requires a bit more setup than other remote control apps, but this IR/Wi-Fi remote app works with a wide variety of hardware and TVs, from your device's internal IR blaster or an external IR device, as well as a W-iFi based controller for a number of older Samsung smart TVs. Among the best features of the app is its configurable interface, allowing you to easily create channel hotkeys and lay out the buttons as you wish. There's also support for multiple devices so you can command your TV, set-top box, and stereo all from a single app.Download Smart TV Remote: AndroidSure Universal Remote(Image credit: Sure Universal)Sure Universal Remote combines the best of IR and Wi-Fi remotes to create a truly universal remote that can handle old-school IR-controlled devices such as TVs and set top boxes while also handling smart appliances and home automation systems through Wi-Fi. The developers boast that the app supports almost 1 million appliances, and the app also allows users to create "systems" of multiple appliances that can be controlled with a single tap, for easy one-button controls to, say, turn all your living room media devices on and off.Download Sure Universal Remote: AndroidControl4 for OS3(Image credit: Control4)Control4 offers up a range of solutions for smart home automation, with users able to control smart appliances and connected utilities such as doors, heating, lights, multimedia systems and more through Control4's OS3 home operating system. While Control4 has dedicated remote control slates and devices, you can also use the Control4 for OS3 app on your Android phone to access and command your connected devices and appliances. Designed for improved customizability compared to previous Control4 OSes, users can personalize their interface and use the Favorites bar for fast access to frequently used devices or room controls. You also get a new active media bar for playback controls of media that you're playing or streaming.Download Control4 for OS3: AndroidUniversal TV Remote(Image credit: WaveSpark)Wait, another app called Universal TV Remote. Yes, though this one used to be known as IR Universal Remote. And it turns your IR blaster-equipped smartphone into a universal remote for a variety of devices, such as TVs, set top boxes, DVD players and air conditioners.The free version of the app comes with a variety of pre-built remote control templates; you're also able to create a single custom remote control that you can save. Paying for the full version of the app removes ads and unlocks the ability to create multiple custom remotes which you can share with other users.Download Universal TV Remote: AndroidAnymote Universal Remote(Image credit: Color Tiger)If you've got an IR blaster mounted inside an older smartphone such as the HTC One, Samsung Galaxy S6, LG G3, try Anymote. This little app turns your blaster-equipped smartphone into a universal remote for a wide variety of appliances, from TVs, set top boxes, DVD players or just about any device that accepts IR commands. The app has a lot of cool features, such as the ability to create custom remotes that bring together commands from different devices into a single screen (for example, turning on your TV, DVD player and sound system with a single tap) and the ability to create custom macros. The app can also function as a Wi-Fi remote for a variety of devices and apps, such as Sonos speakers, the Kodi media center, or VLC.Anymote is a free download, though with an in-app purchase you can add unlimited remotes.Download Anymote: AndroidAIR Remote Free for Apple TV (Free)(Image credit: Yelomo)AIR Remote Free for Apple TV turns your IR blaster-equipped Android device into a replacement for the Apple TV remote, mirroring both the classic button controls and the swipe view, with tap controls mirroring those on the remote hardware. AIR Remote Free does require an IR blaster, with support for the older phones such as the LG G3 as well as a range of Samsung and HTC models. The app is ad-supported, with a premium version removing advertisements.Download AIR Remote Free for Apple TV: AndroidCetusPlay Remote (Free)(Image credit: CetusPlay Global)The CetusPlay Remote app serves as a WiFi-based universal remote app for a variety of set-top boxes and devices, such as Android TV and Fire TV. Simply install the remote app on your phone and the CetusPlay receiver app in your TV, and it'll guide you through the rest of the setup process.You'll also get a rundown of features from CetusPlay, which include a variety of control modes, media Casting from your device, launching TV apps, screenshots, and more. The app is ad-supported, with a $5.99 in-app purchase to remove advertising.Download CetusPlay: Android
