# Android email app two factor authentication

## 2-Step Verification

To help keep your email, photos, and other content safer, complete the task below.

// For example, if the user has started session with Google as First Factor //, authService.getAdditionalUserInfo() will contain data // related to the Google provider with which the user has initiated session. // Ficients! You have started session correctly in a user through multifactor authentication. Follow the steps guided to add your hash Sha-1. If you have not authorized the domain of your application, add it to the list of allowed by clicking Add domain to the right. // You can get the masked telephone number by // resolve.Gethints().Get(SelectedIndex).GetPhoneNumber() // You can get the name to show through // resolve.Gethints().Get(SelectedIndex).GetDisplayName() Yes (Solve.Gethints().GET(SelectedIndex).GetFactorID() == PhoneMultifactorGenerator.Factor\_ID) // The user selected a second telephone factor. This will update the underlying tokens // and activate the ID tokens change listening agent. // Initializes a PhoneAuthOptions object with the suggestion and multifactor session. In some devices, Google Play services can // automatically detect incoming verification SMS and perform // Verification without user action. If the user has several registered secondary factors, ask him when using // Ask the user who second factor must use. Ready! Now it has correctly completed the configuration of another authentication of two factors in Gmail. (CrÅ© image of the image: Google) Since you know what you are doing with 2FA now, you may also want to know how to configure the authentication of two factors on Facebook, how to enable 2FA at the Game Store and how to enable the authentication of two epic Games factors in Fortnite. Apuzatized with Google implementation results // else // Check for other errors, such as an incorrect password. For more information, please refer to the Google Developer Site Policies. Multi-factor authentication increases the security of your application. (The phone call is safer.) Choose one and tap Send. (Image credit: Google) 7. Write Write and place them in a safe and accessible place. (Photo credit: Google) 3. Follow the steps in Authenticate your customer to obtain the SHA-1 hash of your application's You then access the original login result, which includes the provider's specific data and authentication credentials: n: multifactorResolver.resolveSignIn(multifactorAssertion).addOnCompleteListener(new OnCompleteListener() { @Override public void onComplete(@NonNull Task task) { if (task.isSuccessful()) { AuthResult authResult = task.getResult(); // AuthResult will also contain the user, additionalUserInfo, // and an optional credential (null for single e-mail/password) // associated with the start of the first factor's. This option is not work when your phone is disconnected, but it is one of the best ways to do the 2FA in general and it is more secure than to receive the codes by text message. We selected "iPhone", so we were taken to a page with a download link for the app directly from the App Store. Ask the user to enter their phone number. Open your Gmail app, select your account and click Manage your Google account. (Image credit: Google) 2. FirebaseAuth.getInstance().getMultiFactor().enroll(multifactorAssertion, "My Personal Phone Number").addOnCompleteListener(new OnCompleteListener() { @Override public void onComplete(@NonNull Task task) { // ... // If haven't set up Gmail 2FA, we strongly recommend that you do it right now. The Gmail function is 2FA will help you to keep your account secure. Scroll to the right and select the Security option the menu as shown below (Picture credit: Google) 3. // 2) automÅtica. ÅVoilÅ! Ahora has completado con Å©xito el proceso de configuraciÅn de la autenticaciÅn de dos factores en Gmail. PhoneAuthProvider.verifyPhoneNumber(PhoneAuthOptions.newBuilder().setActivity(this).setActivityHint(selectedHint).setCallbacks(generatedCallbacks()).setTimeout(30L, TimeUnit.SECONDS).build()). // Ask the user the SMS verification code. You can also use the Google Authenticator application to generate 2FA verification codes. Important: You must strongly encourage your users to register more than a second factor for account recovery purposes. Do to project configuration. Press Continue. (Image of the image: Google) 6. In some cases, the telephone number can be // verified instantly without the need to send or enter a code // verification. This error contains a resolutory, which you can use to obtain the second inscribed factors of the user. The MFA requires verification of electronic mail. It offers an option that can be omitted to register a second factor during registration. this.verificationid = verificationid; this.forcesendingtoken = Token; // ... multifactorinfo.selectedhint = multifactorresolver.gethints().Get(SelectedIndex); // Send the verification code by SMS. Get A Multi-Factor Session For The User: User.getMultiFactor().GESESSION().DDNOCOMpletelistener(New Oncomplete (@NonNull Task Task) (Task.isSuccessful()) (Multifacession MultifactorSession = Task.getResult()); Build OnVerificationStateChangedCallbacks an object to handle different events in the verification process: OnVerificationStateChangedCallbacks callbacks = new () { public void @Override onVerificationCompleted (credential PhoneAuthCredential) { // This will be invoked callback in two Situations: // 1) Instant verification. Multifactorinfo.selectedHint = multifactorresolver.gethints().Get(SelectedIndex); // Else // second not supported factor.
